

O-Plate™ (O'Connell Heavy Rescue Plate)™

The O'Connell Plate™ is a multipurpose extrication and heavy rescue tool which gives modern day rescuers more tools for dealing with today's complex rescues.

Call or go online to order a FREE instructional DVD!

You will probably use the O-Plates™ most frequently in vehicle extrication, where they will help make dash rolls quicker and safer.

When heavy rescue is necessary, the O-Plates™ are instantly available to anchor systems, pull up to 19,000 lbs. of concrete or debris (using your hydraulic extrication equipment if necessary), bridge holes or joists to anchor pushing or pulling systems, and enhance the capabilities of jacks.

This gives first responders the capability to begin rescue operations at a building collapse or other heavy rescue scene before Heavy Rescue teams arrive, thereby saving more lives.

Rocker Panel Ram Support

Hydraulic Tool Support

19,000 lb. Anchor / Hook

Pull / Anchor Systems

Wheel Traction for Winching

Wheel Pull / Edge Protector

O-Plate™ Junior (O'Connell Multipurpose Rescue Plate)™

The O'Connell Plate™ Junior is a multipurpose extrication and light rescue tool. Lightweight and versatile, O-Plate™ Juniors have a rated pulling strength of 8,000 lbs.

You will likely find the O-Plate™ Junior is most appropriate for vehicle extrication, stabilization and hydraulic tool support. The O-Plate™ Junior can be used as a rocker panel ram or jack support as well as supporting spreading tools.

Insert your Hi-Lift® type jack into the foot pocket to keep the jack from sinking in mud and snow, or use it to increase the effectiveness of your jack's hook.

Jack Hook Extender / Base
